# Section Overview

## Logic elements

This section gives basic specifications for Vickers logic element and pressure compensator screw-in cartridge valves. Its purpose is to provide a quick, convenient reference tool when choosing these valves or designing a system using these components.

All cartridges have hardened and ground spools, and/or honed sleeves, poppets and sharp-edged ground steel seats. This provides an excellent product that is dirt-tolerant, has reliable seating, and is suitable for fast cycling with long life.

These Vickers cartridges provide the system designer with a versatile range of elements for use in MCD packages for controlling pressure, flow and direction of flow.

The range includes:

- Pressure compensators
- Pressure compensators with priority and bypass outlets
- Differential-pressure sensing elements

The correct selection of these products can enhance machine performance, shorten the design process and minimize manufacturing costs of manifold blocks.

### Differential-pressure sensing elements – DPS2

For controlling pressure, flow or direction (including 3- and 4-way bridge circuits) the DPS2 is used with the aid of external pilot operators. The DPS2 elements are function building blocks which respond to pressure differential signals, providing the capacity to switch or modulate flows up to 303 L/min (80 USgpm) and pressure to 350 bar (5000 psi).

The choice of pilot arrangements related to DPS2 variants can minimize the number of construction holes in a manifold, simplifying design and reducing costs.

**All poppet type DPS2 elements have recently been upgraded to 350 bar (5000 psi).**

### Flow compensators – PCS3

An essential component of a pressure compensated flow control which, with an external fixed or variable orifice, provides the required compensated flow characteristic. Excess flow is diverted at maximum system pressure. Excess fluid upstream must be diverted e.g. through a relief to tank.

### Pressure compensator with priority and bypass outlets – PCS4

Similar in function to the PCS3. The major difference is that excess flow is diverted at priority flow pressure, instead of at maximum system pressure, as is the case with PCS3 compensators. The excess flow can pass to a secondary circuit or to tank.

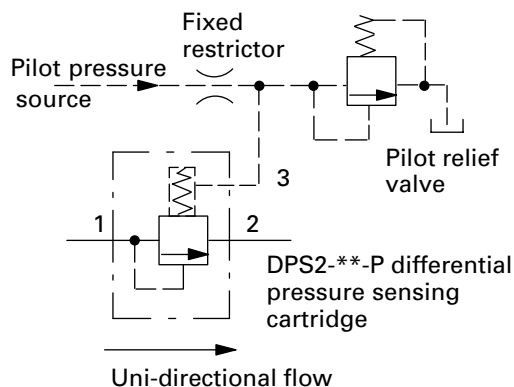

# Application Examples

DPS2 Logic elements for pressure control

## Pressure control functions

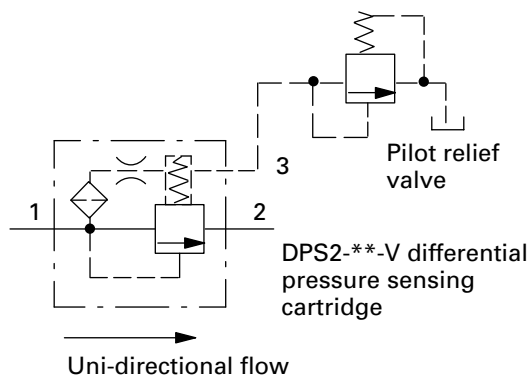

Pressure relief or Sequence example

With external pilot supply and pilot relief

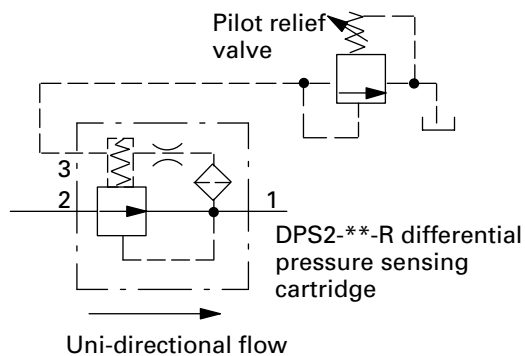

Pressure relief or Sequence example

With internal pilot supply and pilot relief

Pressure reducing example

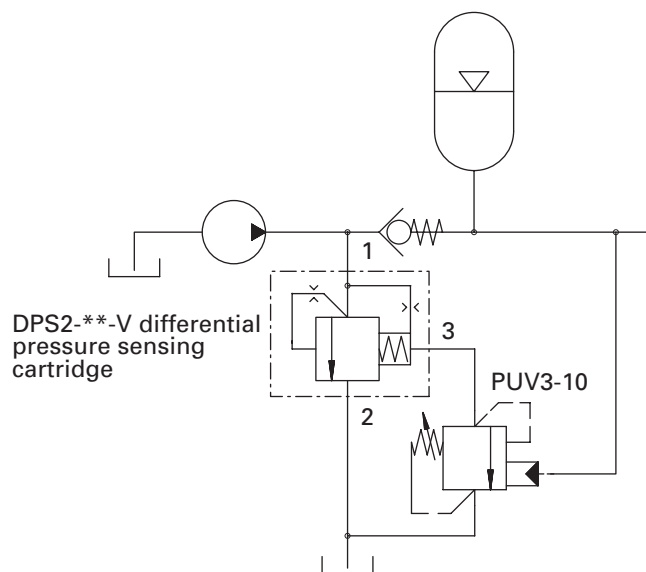

Non-relieving type

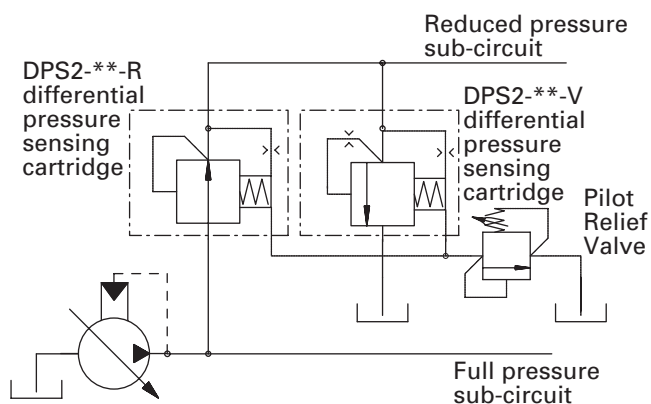

# Application Examples

DPS2 Elements for pressure control

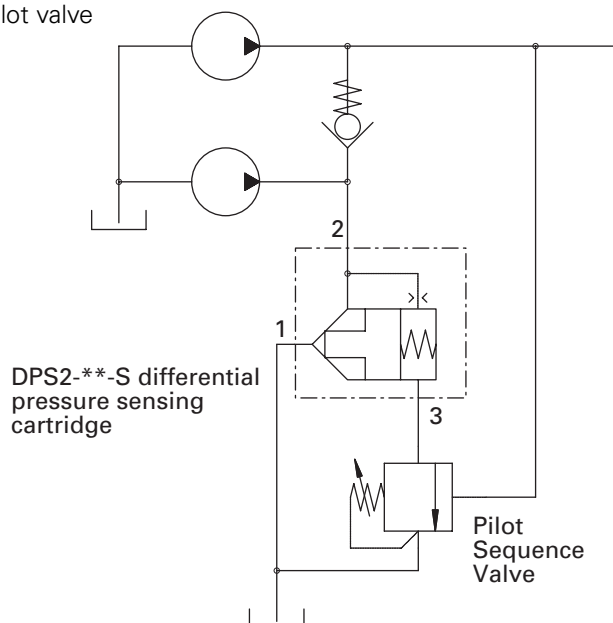

Accumulator charging with PUV3-10 pilot stage

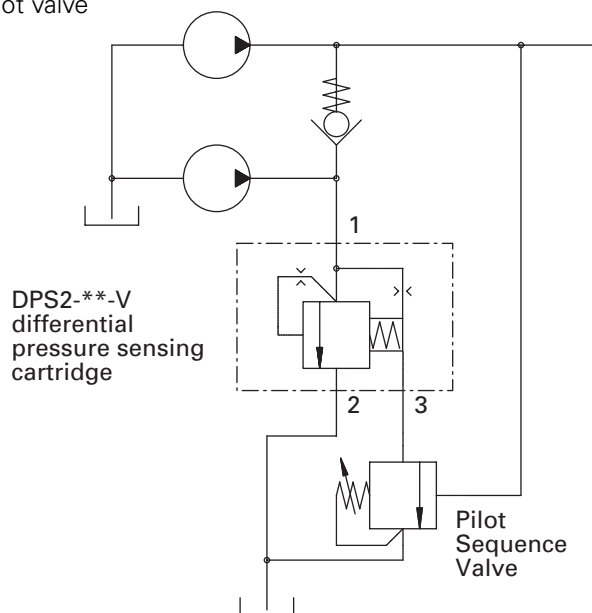

Pressure reducing and relieving

Hi/Low unloading circuit with externally piloted pressure sequence pilot valve

Hi/Low unloading circuit with externally piloted pressure sequence pilot valve

# Application Examples

DPS2 Elements for flow control

## Pressure compensated flow control example

With downstream fixed or variable restrictor

## Pressure compensated priority flow control example

With fixed or variable priority flow control

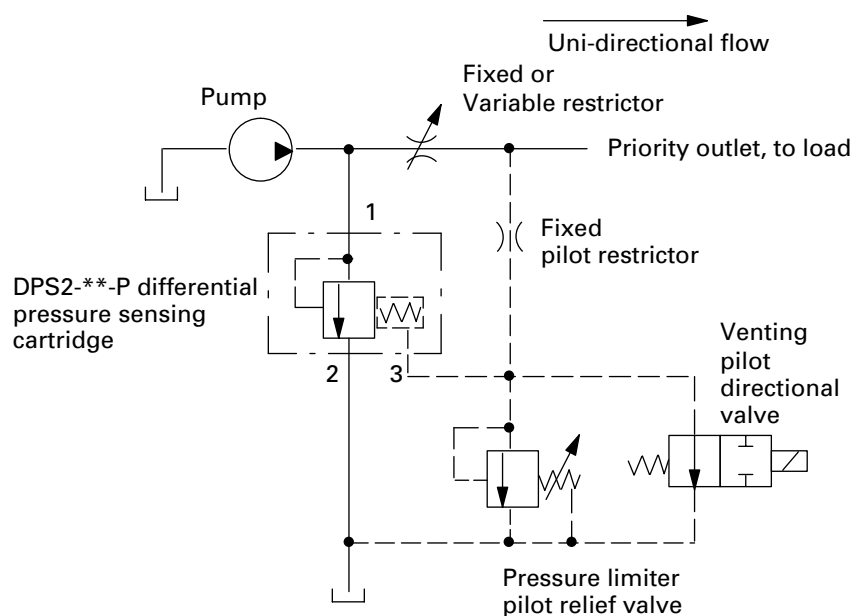

# Application Examples

PPS2 Elements for flow control

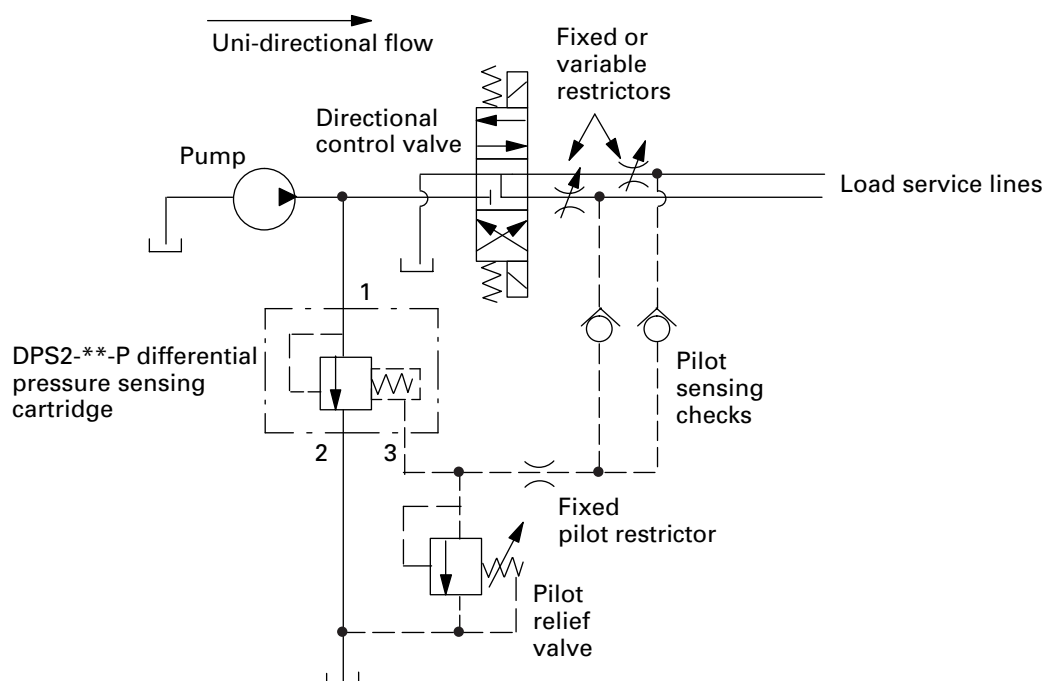

## Load sensing priority flow control example

With pressure limiting and venting

## Load sensing priority flow control example

Directional control version with pressure limiter

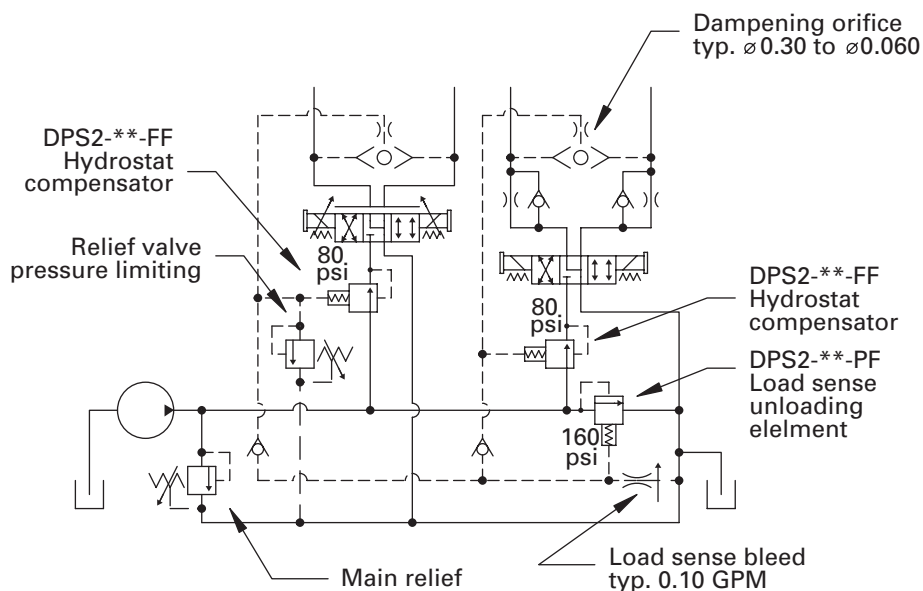

# Application Examples

PPS2 Elements for flow control

## Load sense circuit example

For parallel operation

## Load sense circuit example

For priority and parallel operation

Note

1. Pressure limiting relief must be < main relief setting.
2. If pressure limiting is not used; port reliefs set < main relief are required.

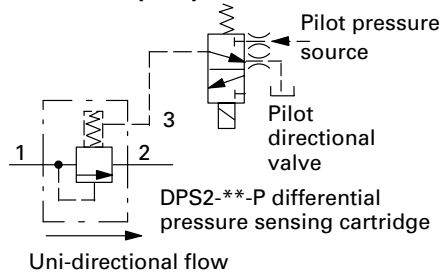

# Application Examples

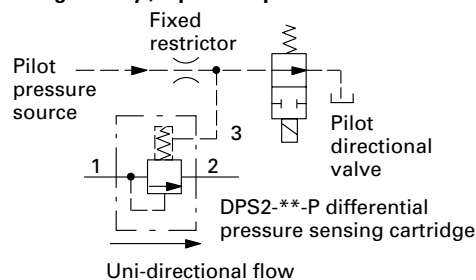

DPS2 Elements for directional control

## Two-way, two-position, normally open examples

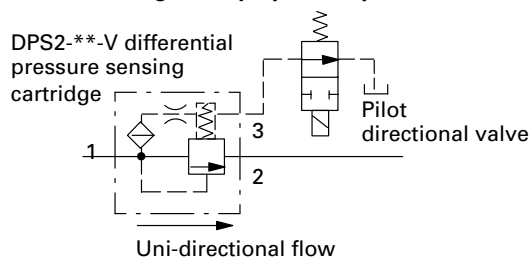

Switched by 3-way, 2-position pilot valve and external pilot pressure

Switched by external pilot pressure and vented through 2-way, 2-position pilot valve

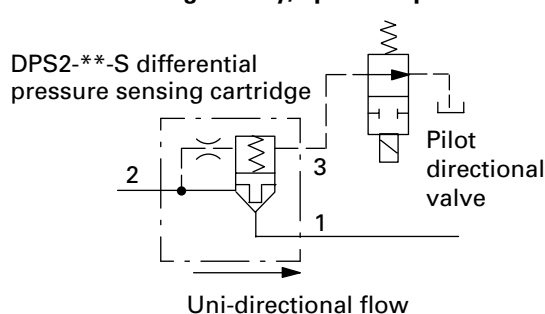

With DPS2-\*\*-V cartridge and internal pilot supply & vented through 2-way, 2 position pilot valve

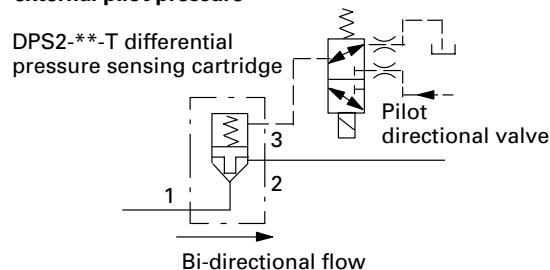

With DPS2-\*\*-B cartridge and internal pilot supply & vented through 2-way, 2 position pilot valve

With DPS2-\*\*-S cartridge and internal pilot supply & vented through 2-way, 2 position pilot valve

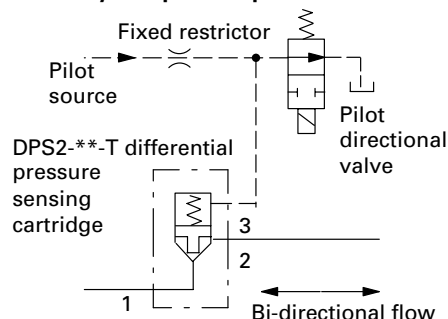

With DPS2-\*\*-T cartridge and internal pilot supply & switched by 3-way, 2 position pilot valve and external pilot pressure

With DPS2-\*\*-T cartridge and internal shuttle-selected pilot supply

With DPS2-\*\*-T cartridge, external pilot supply and two-way two-position pilot valve

# Application Examples

DPS2 Elements for directional control

## Three-way bridge circuits

Example 1, with DPS2-\*\*-T  
Poppet type

Example 2, with DPS2-\*\*-P  
Spool type

Example 3, with DPS2-\*\*-P

valve.

# DPS2-10

Differential pressure sensing valve

## Description

The DPS2-10 is a differential pressure sensing valve, available as either a spool or poppet type and with either, internal or external pilot.

## Functional Symbols

See pages I-18 & I-19

## Profile View

## Operation

This valve is used as a main section of a pilot controlled valve assembly. This valve has multiple uses when used with either directional control, flow control or pressure control cartridges. Refer to application examples.

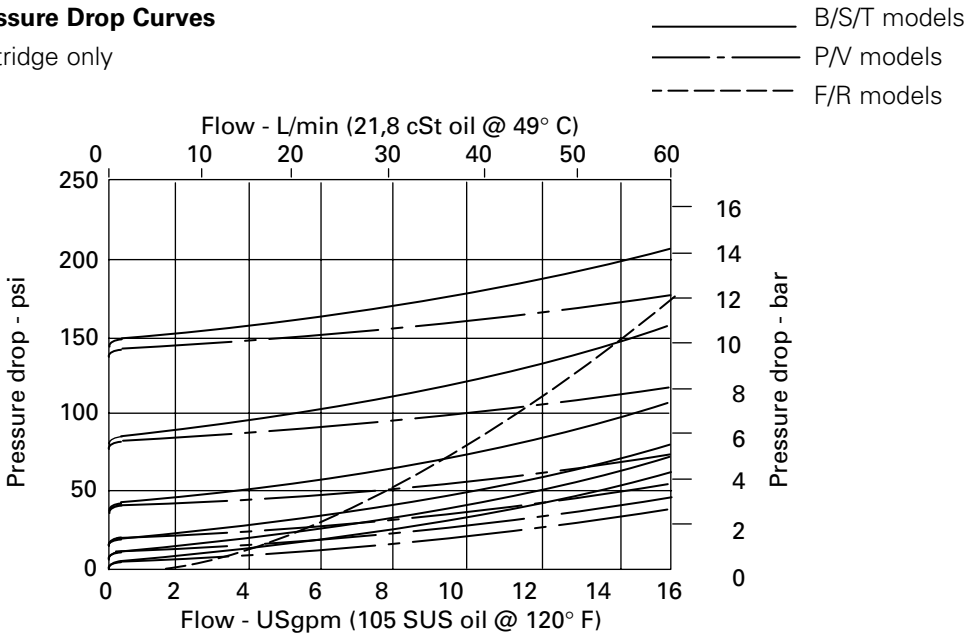

## RATINGS AND SPECIFICATIONS

<i>Performance data is typical with fluid at 21,8 cSt (105 SUS) and 49°C (120°F)</i>	
Typical application pressure (spool type)	290 bar (4200 psi)
(poppet type)	350 bar (5000 psi)**
Rated flow	60 L/min (15 USgpm)
Pilot ratio (spool type P,V,R,F)	1:1
(poppet type B,S,T)	2:1
Internal leakage, poppet type	Port 1 to 2: < 5 drops/min max @ 350 bar (5000 psi)
Internal leakage, spool type	82 cm <sup>3</sup> /min. (5 in <sup>3</sup> /min) max @ 290 bar (4200 psi)
Temperature range	-40° to 120° C (-40° to 248° F)
Cavity	C-10-3S
Standard housing materials	Aluminum
Fluids	All general purpose hydraulic fluids such as: MIL-H-5606, SAE 10, SAE 20, etc.
Filtration	Cleanliness code 18/16/13
Weight cartridge only	0, 14 kg (0.30 lbs)
Seal kits	889650 Buna-N 889652 Viton®

Viton is a registered trademark of E.I. DuPont

<div>1</div> <b>Function</b> PCS3 – Pressure compensator restrictive type
--

Dimensions

mm (inch)

Torque into aluminum housing to 128-155 Nm (95-115 ft. lbs)

**Description**

The PCS4-10 is a screw-in, pressure compensator cartridge for the use as a bypass or priority flow control.

**Functional Symbols**

**Sectional View**

**Operation**

This valve, when used with either a fixed or variable orifice on port 4, maintains a constant flow out port 3, regardless of pressure changes downstream of port 3. This is based on whatever pressure differential is chosen. All flow in excess of the priority requirement is bypassed from port 1 to port 2. If the priority port is deadheaded, the valve will try to direct flow out of the priority port and shut off the bypass flow, blocking of all flow.

RATINGS AND SPECIFICATIONS	
Performance data is typical with fluid at 21,8 cSt (105 SUS) and 49°C (120°F)	
Typical application pressure (all ports)	210 bar (3000 psi)
Cartridge fatigue pressure (infinite life)	210 bar (3000 psi)
Rated flow	38 L/min (10 USgpm)
Cavity	C-10-4
Standard housing materials	Customized housings are necessary for close-coupling the compensator and orifice
Temperature range	-40° to 120°C (-40° to 248°F)
Fluids	All general purpose hydraulic fluids such as: MIL-H-5606, SAE 10, SAE 20, etc.
Filtration	Cleanliness code 18/16/13
Weight cartridge only	0,14 kg (0.32 lbs)
Seal kits	889651 Buna-N 889653 Viton®
Viton is a registered trademark of E.I. DuPont	

**Performance Characteristics**

Cartridge only

**A** – 2,8 bar (40 psi) (control ΔP)  
**B** – 5,5 bar (80 psi) (control ΔP)  
**C** – 11,0 bar (160 psi) (control ΔP)

PCS4 – 10 (V) – \* – \*\*\* – 00

1 Function

**PCS4** – Pressure compensator bypass type

2 Size

**10** – 10 Size

3 Seals

**Blank** – Buna-N  
**V** – Viton

4 Port size

**0** – Cartridge only  
Customized housings are necessary for close-coupling, compensator and orifice

5 Pressure differential (nominal)

**40** – 2,8 bar (40 psi)  
**80** – 5,5 bar (80 psi)  
**160** – 11,0 bar (160 psi)

6 Special features

**00** – None  
(Only required if valve has special features, omit if 00)

Dimensions

mm (inch)

Torque into aluminum housing to 47-54 Nm (35-40 ft. lbs)

**Description**

The PCS4-16 is a screw-in, pressure compensator cartridge for the use as a bypass or priority flow control.

**Functional Symbols**

**Sectional View**

**Operation**

This valve, when used with either a fixed or variable orifice on port 4, maintains a constant flow out port 3, regardless of pressure changes downstream of

port 3. This is based on whatever pressure differential is chosen. All flow in excess of the priority requirement is bypassed from port 1 to

port 2. If the priority port is deadheaded, the valve will try to direct flow out of the priority port and shut off the bypass flow, blocking of all flow.

**RATINGS AND SPECIFICATIONS**

<i>Performance data is typical with fluid at 21,8 cSt (105 SUS) and 49°C (120°F)</i>	
Typical application pressure (all ports)	210 bar (3000 psi)
Cartridge fatigue pressure (infinite life)	210 bar (3000 psi)
Rated flow	114 L/min (30 USgpm)
Cavity	C-16-4
Standard housing materials	Customized housings are necessary for close-coupling, the compensator and orifice
Temperature range	-40° to 120°C (-40° to 248°F)
Fluids	All general purpose hydraulic fluids such as: MIL-H-5606, SAE 10, SAE 20, etc.
Filtration	Cleanliness code 18/16/13
Weight cartridge only	0,50 kg (1.12 lbs)
Seal kits	889660 Buna-N 02-175435 Viton®

Viton is a registered trademark of E.I. DuPont

**Performance Characteristics**

Cartridge only

- A – 2,8 bar (40 psi) (control ΔP)
- B – 5,5 bar (80 psi) (control ΔP)
- C – 11,0 bar (160 psi) (control ΔP)
